CRITICAL: Google AI Studio’s "Delete" Button is a UI Fraud (Video + Server Log Proof)

gemini-api

Bitu79

1 July 12, 2026, 6:28am

Stop believing your sensitive prompts and data are deleted when you click “Delete” in Google AI Studio. They are not. I have gathered tamper-proof, cross-platform evidence proving that **Google actively retains your backend data and session context indefinitely, even after you permanently empty your trash.**

The “Delete” button (recently renamed to “Move to Trash” without fixing the underlying issue) is a deceptive UI Dark Pattern. It only deletes the local JSON pointer in your Drive. The actual Gemini backend ignores your deletion request completely.

Here is the definitive proof that Google cannot explain away.

The Evidence: Cross-Platform & Tamper-Proof

I have documented the exact flaw on both Desktop and Android.

1. **Desktop Proof (“Google AI Studio’s Delete button is misleading”):**
   I created a prompt, deleted it, and permanently emptied the Google Drive trash. The JSON was gone. Then, I used Google’s official Drive File Recovery tool. The JSON was restored, and when opened, **the Gemini model instantly continued the conversation with full context.**
   If the backend had actually deleted my data, restoring a UI pointer (JSON) would result in a dead session. The model’s ability to continue proves the server never erased anything.
2. **Mobile Proof (Part 2):**
   I reproduced the exact same failure on Android. This confirms it is a systemic, architectural data-retention mechanism, not a browser caching glitch.

3. **The Tamper-Proof Verification (My Activity):**
   To prevent anyone from claiming these videos are edited, I exported and archived my official *Google My Activity* logs during the exact timeframe of the tests.
   You can verify the exact timestamps of every HTTP request, click, and restoration here:
   👉 **My Activity : Free Download, Borrow, and Streaming : Internet Archive**
   Google's own server logs prove my video is 100% authentic and synchronized.

The "Key vs. House" Reality

Google is playing a dangerous game with GDPR Article 17 (Right to Erasure). When you delete a chat, Google takes away your "key" (the JSON file) and tells you the house is gone. But the "house" (your backend data, session, and context) remains fully intact on their servers. By recovering the key, you can walk right back in.

This is undocumented, unauthorized data retention. It means your "deleted" sensitive data is still being processed and stored by Google without your consent.

Call to Action to Developers

Don't just take my word for it. **Test it yourselves.**

1. Create a chat, delete it, and empty your Drive trash.
2. Use the Drive Recovery tool.
3. Watch the model magically remember everything you "permanently deleted."

Google has ignored official GDPR complaints and DPO requests regarding this for months. They silently renamed the button, but kept the illegal backend retention.

It is time for the developer community to hold them accountable. If you reproduce this, post your results below.

These videos serve as irrefutable evidence that Google actively retains your backend data and chat context, even after you have permanently emptied the trash, which means Google is lying about the deletion of prompts.

Bitu79 5 July 12, 2026, 3:39pm

GOOGLE'S OWN AI JUST VALIDATED MY EVIDENCE OF THEIR UI FRAUD

This is the ultimate, documented proof that Google AI Studio's "Delete" button is a deceptive UI pattern, and I used Google's own visual search engine to prove it.

I didn't prompt the AI with arguments. I didn't feed it any text summaries. I set a trap using a purely visual search, and the system autonomously incriminated itself.

HOW IT HAPPENED (THE TIMELINE):

1. **The Trap:** I uploaded my proof-poster (summarizing the fraud) to my forum thread on discuss.ai.google.dev.
2. **Visual Search:** Hours later, I used Google Lens / AI Search. I input *only* the forum link and the image. I asked a single, neutral question: *"Is this picture found here?"*
3. **The AI's Confession:** Google's AI Overview didn't just answer "Yes." It autonomously processed the image text, cross-referenced it with the URL, and **auto-generated a technical breakdown of Google's own systemic flaw.**
4. **The Confirmation:** When I asked, *"Are you sure this picture is here?"*, the AI explicitly verified my core argument. It wrote: *"The argument about the 'Key vs. House' reality (where the local JSON file is removed but the actual Gemini backend data remains fully intact on their servers)."*

THE IRREFUTABLE PROOF:
The Google AI visually ingested the evidence, matched it to the user "Bitu79", and **verified as a fact that Google retains deleted data on their backend.**

To ensure Google cannot claim these screenshots are edited or “hallucinated,” I executed this search while logged in. **Every single step, query, and AI response is permanently timestamped in my official “Google My Activity” server logs.**

Google’s own algorithm just served as an expert witness against their illegal data retention practices. The evidence is logged. The fraud is confirmed.

Az Ön utasítása:
https://discuss.ai.google.dev/t/critical-google-ai-studio-s-delete-button-is-a-ui-fraud-video-server-log-proof/174465 Is this picture found here?

A Kereső válasza:
Yes, this picture is directly associated with the forum post you linked on **discuss.ai.google.dev**.

The image serves as a visual summary of the claims made by the user **Bitu79** in that specific thread titled "CRITICAL: Google AI Studio's 'Delete' Button is a UI Fraud (Video + Server Log Proof)".

Connection Between the Image and the Post:

- **The Content:** The text within the image (e.g., "The 'Key vs. House' Reality," "Model continued responding with full context") mirrors the specific evidence and metaphors used by the author in the forum post.
- **The Evidence:** The image mentions documented proof on Desktop and Android and a link to **Archive.org** for official My Activity logs, both of which are central components of the linked discussion.
- **Author Information:** The image includes a small profile icon and the username "Bitu79," which matches the poster on the Google AI Developers Forum.

Az Ön utasítása:
Are you sure this picture is here?

A Kereső válasza:
Yes, the picture is definitely from that specific link.

The image is a stylized visual graphic created to illustrate the main points of the user **Bitu79**'s forum post on the Google AI Developers Forum.

Every detail in the poster is pulled directly from the text of that exact discussion thread:

- **The Title:** The graphic prominently features the thread title: *"CRITICAL: Google AI Studio's 'Delete' Button is a UI Fraud (Video + Server Log Proof)"*.
- **The Text:** The center text block starts exactly with the opening statement of the post: *"Stop believing your sensitive prompts and data are deleted when you click 'Delete' in Google AI Studio. . ."*
- **The User Handle:** The handle **Bitu79** and the relevant `gemini-api` tag are explicitly displayed right above the text snippet.

If you would like to explore this topic further, I can help you look into **how data deletion works behind the scenes** or find the **Archive.org source logs** mentioned in the image. Which direction should we go?

Miért szerepel itt ez a tevékenység?

A rendszer azért mentette a tevékenységet az Ön Google-fiókjába, mert a(z) **AI-mód** termékek használatakor be volt kapcsolva a következő beállítás: **Internetes és alkalmazástevékenységek**.

Kezelés

Ha másokkal közösen használja eszközét, vagy ha egyszerre több fiókkal is bejelentkezik, akkor olyan tevékenység is megjelenhet itt, amely másik fiókhoz kapcsolódik. További információ

Bitu79 7 July 12, 2026, 4:46pm

The AI mode (Google AI / Lens / AI Overview) recognized the image on its own, linked it to the forum post, and then described the arguments of my post in its own words (Key vs. House, backend data remains, documented evidence, etc.).

In other words, I didn't explain it to the AI; rather, the AI itself formulated that the image belongs to my post, the image depicts the "key vs. house" reality, deleting the JSON does not mean deleting the backend data, and the model continued the conversation with full context.

The whole point of my post is that if Google wants to refute my evidence, they have to refute their own AI, because their AI stated the exact same thing that I am claiming in this post.

Summary:

The AI mode independently recognized and interpreted the image.

The AI mode independently recognized and interpreted the content of the post.

If Google wants to refute this, it must refute its own AI.

Bitu79 9 July 13, 2026, 3:22am

The Gemini 3.1 Pro Preview automatically detects Google’s “permanent delete” flaw.

I launched Gemini 3.1 Pro Preview in a completely new chat.
I didn’t give it any prompt.
I didn’t write anything.
I didn’t explain anything.
I only uploaded the video.

Videólink

https://youtu.be/LBQfNbPCxQw

Fájlnév

unknown_2026.06.08-05.03.mp4

The model analyzed the video automatically, with zero context, and described the following:

1. A “permanently deleted” file is not actually deleted

According to Gemini:

> “Permanently deleted files are not immediately removed from Google’s servers.”

This means:

- the Drive interface is misleading,
- “delete” is only a flag,

- the file physically remains on Google’s servers.

2. Google can restore a ‘permanently deleted’ file

The model states:

> “They can be fully restored through an automated customer support function.”

This means:

- “permanent delete” is not permanent,
- Google continues to store the data,
- the user is misled.

3. The restored data is 100% intact

Gemini:

> “The session is fully restored, and the model responds flawlessly.”

This means:

- not only the file returns,
- but the entire chat session,
- the backend context,
- everything is intact.

4. The Google AI Studio interface is misleading

The model:

> “The ‘permanent delete’ button does not reflect reality.”

This means:

- the interface only checks the JSON file,
- the server-side data is not deleted,
- the user receives false information.

5. Gemini says this violates GDPR

The model:

> “There are data protection concerns… Google continues to store the data.”

This means:

- the “right to be forgotten” is not fulfilled,
- Google still has access to the data,
- this is a violation of data protection principles.

A videó adatai
Google AI Studio's "Delete" button is misleading.
Here is what actually happened during my test: I created a prompt, deleted it, emptied the Google Drive Trash, and the JSON file was completely gone. Then I used Google's official recovery tool. The prompt reappeared, and the model immediately continued the chat with full context.
This proves that Google does not delete the server-side chat. The deletion only removes the JSON file, which is just the UI entry. The server-side conversation, session, and context remain untouched.
If Google truly deleted the chat on the server, the session would be gone, the context would be gone, the model could not continue the conversation, and restoring the JSON would not bring anything back. The fact that the model continued instantly after recovery shows that the server-side data was never deleted.
The "Delete" button in AI Studio only deletes the UI metadata, not the actual chat. The server-side data is kept even after the user initiates deletion, and Google's own recovery tool exposes this behavior.
This is not just a transparency issue. Keeping server-side data after a user requests deletion violates the GDPR right to erasure (Article 17). The user is told the data will be deleted, yet it is retained. This also raises further GDPR concerns, including data minimization, purpose limitation, and lawful processing, because the provider keeps data without a valid legal basis once the user has requested deletion.
I know you changed the button based on sentences you copied from my posts. And I have
